

You certainly like parties, but what if you're the party organizer?
Organizing a party can seem difficult and tedious.

Design, Modelling, and Development of a Digital Services Project

Goal

To understand the fundamental concepts of UX research and prototyping; apply user-centric design techniques for modeling digital services; and design effective prototypes using wireframing tools such as Figma and no-code/low-code platforms including Microsoft Power Platform tools — Power Apps, Power Automate, and Dataverse. Additionally, to implement the ChatGPT API for conversational functionality within the app. The ultimate objective is to create a user-friendly mobile application for both Android and iOS platforms that streamlines the process of planning and managing parties from start to finish.

The **benefit** of using the app is that it provides the freedom to have, share and gather data for party planning in a single place. The app provides reliable and up-to-date information to organize a successful party quickly and efficiently.

The **problem** this project aims to address is the complexity and time-consuming nature of planning and managing parties at any time and according to the user's budget and convenience.

From a **business perspective**, the project aims to provide a valuable tool for party individuals, potentially generating revenue through premium features or advertisements while ensuring a positive user experience. To encourage the purchase of membership, all members are provided with discounts on the services of partner companies, for example, a 10% discount on cake.

Monetization models: In-app advertising, Affiliate marketing and In-app purchases.

5 Main Functional Requirements for the App

Party Planner App User

- Can choose the party time and date from the calendar, edit and delete
- Has the option to input data about the party to a To-Do list, add a party budget
- Has the option to create invitations and send them to guests
- Has the option to buy a membership
- Has the option to view information about service providers and party locations

Feature Requirements of the App

Party Planner App User

Free membership	Premium membership
• Party calendar • Party countdown • To-Do list • Budget • Push Notifications • Service availability • Vendor ranking (review, NPS) • GPS Location Maps • Settings (Language, Membership)	• Guest list (messages) • Invitations • History • Vendor notifications

Persona: User Needs – Solution

Party Planner App User

Name: Minna Lahti

Family: Married with 2 children, aged 10 and 6

Age: 42 years

Hometown: Siuntio, Uusimaa, Finland

Occupation: Human resource specialist

Education: Bachelor of Business Administration (BBA)

Bio

Minna has focused on her career and work hard to achieve her professional goal to become an HR director. She has a long working days. She is working in the city of Helsinki and enjoys a peaceful life in a village in Siuntio. She is well known there and has many friends around Finland.

She likes to spend time with her children and participates in her children's hobbies Facebook groups.

Minna's is renovating her old family house and she spends her money carefully.

Minna's hobbies are yoga and jogging. Minna is comfortable with using mobile apps in her daily activities and she is an admin of the Yoga group on Facebook.

Goals

- To be able to successfully organise children's parties as quickly and easily as possible
- To be able to fit into budget
- To be able to view different alternatives of services and venues

Frustrations

- It is difficult to find out the venue
- It is difficult to find service providers
- It is difficult to control the budget
- Party organizing is very time-consuming

Solutions

- A digital platform which helps to organise parties by
- Providing a wizard like tool
 - Providing a budgeting capabilities
 - Creating TO-DO list
 - Search and filter service providers and venues
 - Maintaining guest list and invitations

Name: Jussi Jokela

Family: Single

Age: 25 years

Hometown: City of Espoo, Uusimaa, Finland

Occupation: Customer service advisor in a bank

Education: Master of Economic

Bio

Jussi has lived in his own rented small and cosy apartment for two years. He started to work in a bank after his graduation. He is social and likes to meet new people. Jussi would go out often with his friends and liked to spend time in the capital region. He likes to visit new places and is not afraid to spend money. Having good memories is very important for Jussi.

Jussi is familiar with digital equipment and is most of the time available online. He uses WhatsApp, Facebook and Instagram.

His hobbies are football and gaming.

Goals	Frustrations	Solutions
• He wants to keep in touch with his friends • To find one single app for party planning which does everything instead of using many apps • How to easily find the history of previous parties • To know who is coming on the party • To find a new place for a party • Don't want to have party in own house, because an apartment is too small	• It is quite difficult and time-consuming to use many apps to plan one-party • Calculating costs is difficult to use many apps • It is hard to remember previous parties' details • It is hard to manage the guest list • As a party planner, I need to see if there are other places for parties that I haven't used before • A small apartment is not enough to invite many friends at one time	• The app should contain all features for party planning • The app should receive a response from guests that were involved to the party • The app should have many possibilities for different party places

The target user group is Individual Party Hosts: People who want to organize private parties for birthdays, anniversaries, weddings, and other personal celebrations.

The main target user of the app is tech-savvy parents who have children aged from 5 to 12 years. Parents are employed and manage their free time carefully. Birthdays and other important holidays in a child's life are the most important days of the year for his parents, about which they want to leave the best memories. They like to spend holidays with family members or friends visiting different places. They live in a village in Finland.

Non-target user groups: party guests, vendors, family members, the children's relatives.

5 main user stories

target user –the party planner

1. As a registered user I want to create a profile with my contact and location details,

so that I can use the app's features which require contact and location information, effectively.

2. As a user, I need the app to provide a wizard-like tool, so that I can plan the party with minimal effort and without mistakes.
3. As a user, I need a calendar feature, so that I can choose easily the date and time of the party.
4. As a user, I want to see the location of the service providers and venues on a map, so that I can filter them according to my distance preferences.
5. As a user, I need to maintain a guest list, so that I can manage the headcount.

User stories groups:

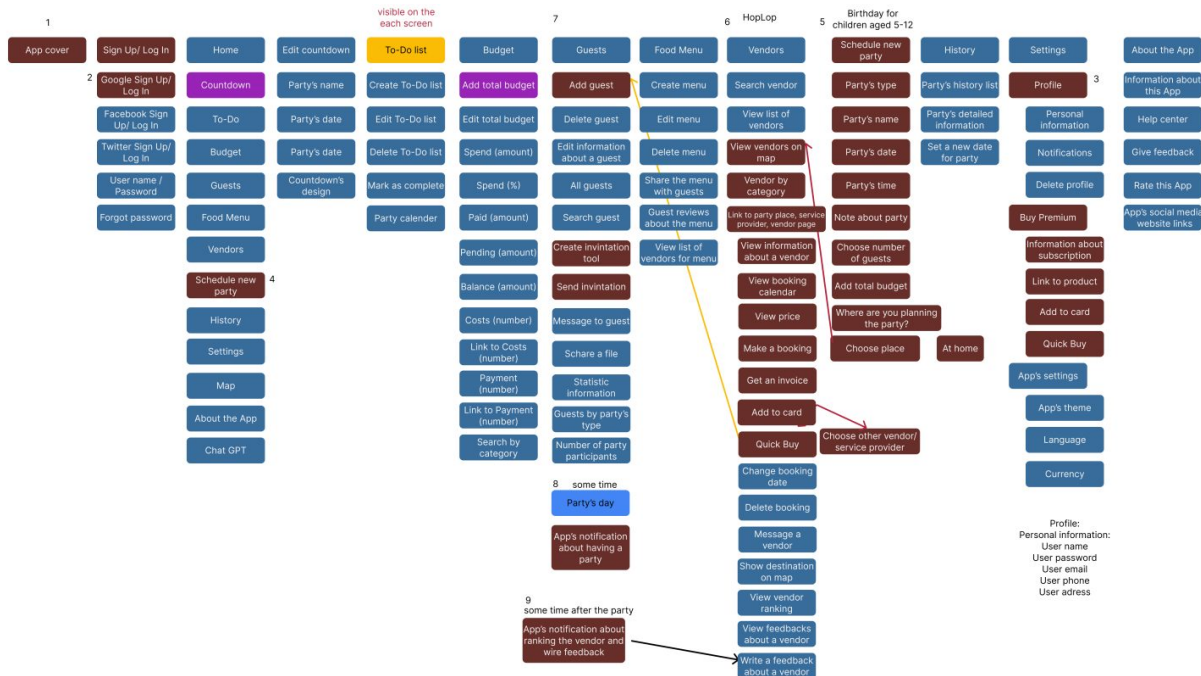

- new/existing user, managing account
- managing to-do list and calendar
- managing budget
- managing vendors
- managing guests
- managing premium subscription
- using the app accessibility features, app's help service

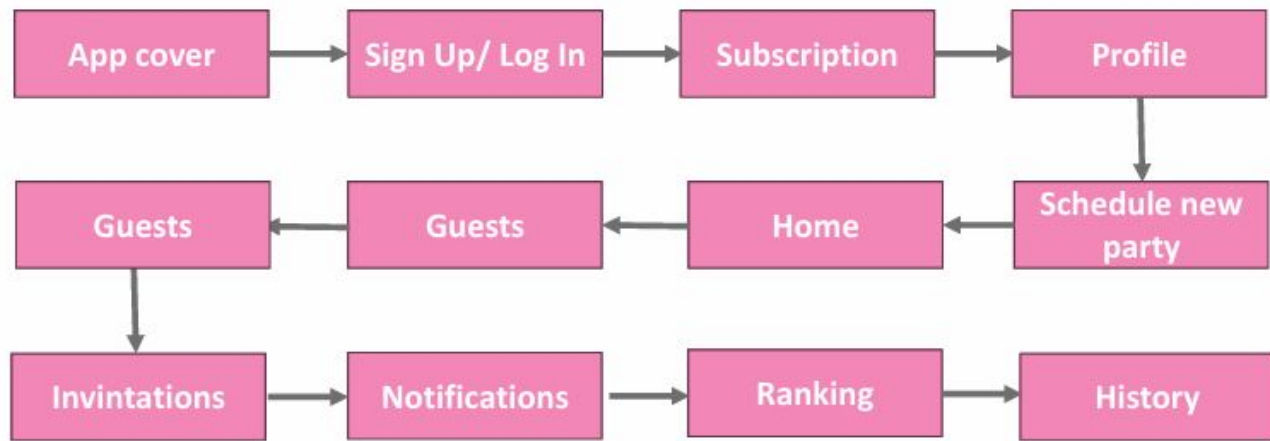

Bash Style Guide

slogan "Plan a Party with ease"

	Primary Brand Colors #FE7F2D #233D4D #6096BA	Types of UI components	UI elements

Wireframes

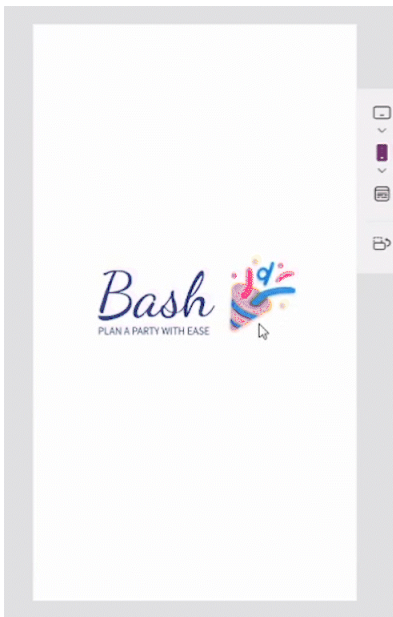

Minna Lahti is a new user of the party planning app. She needs to plan a birthday party for her six-year-old son.

Prototype and user interaction

Presentation on Bash — Party Planning App

Prototype's future improvements

- Create more screens: budget, notifications, history etc.
- Create user-flow for a vendor and guest
- Offering more detailed and customizable features on several screens: vendors, invitations, ranking etc.

- Implement API's
- Enhance usability and visuality: guidance, notifications, charts, graphics, icons, etc.
- Implement more UX principles for a better user experience
- Usability testing

Challenges Faced During the Bash – Party Planning App Project

- Time Management
- Power Apps Troubleshooting

Key Successes and Achievements

- Project Management
- Environment Preparation
- Task Completion and Quality Assurance

Tools

- Figma
- MS Power Platforms: Power Apps, Power Automate, and Dataverse
- MS PowerPoint
- MS Teams
